For heads & jambs of internal doors, external doors & hinged casement windows

SAG/097

The Blizzard seal carrier is available in 2 sizes of 16 or 21mm wide. The 16mm holders (sections SC & SD) are ideal for situations where the seal sections are to be butt jointed whereas the 21mm holders (sections SA & SB) are designed to accommodate mitred jointing.

The base holder, which accommodates one of the range of flexible neoprene seal inserts, is screw fixed to the required surface. These screw fixings are then hidden by the cover section, which is available in a choice of finishes to match the Sealmaster threshold sections e.g. Blizzard SAS/089 matches Smartseal TAS/WAS.

SAS/089

APPLICATIONS

A surface mounted stop seal with hidden fixings, suitable for both internal and external single action doors. Blizzard seals are also suitable for single action casement windows.

FEATURES & BENEFITS

Blizzard seals are suitable for the jambs and heads of door frames and can be used in conjunction with any Sealmaster threshold seal to provide a high performance weather, draught proofing, acoustic and light sealing solution.

Blizzard seals are effective in improving the acoustic performance of an existing door.

The small and neat Blizzard sections may also be used to provide effective sealing solutions for Windows.

HOW TO SPECIFY

e.g. Sealmaster Blizzard SAS/089 to suit door inmm high bymm wide opening.
